

LAMAR LED Now Has U.L. Approval For Factory Installation of Internal And External Driver LED Tubes For Many Surface Mount Luminaires!

*Many of our fixtures available with
DLC qualified LED tubes

LAMAR LED is an industry leader in creating cost effective and energy saving solutions for every lighting application. Our latest advancement is U.L. approval for factory installation of both internal and external driver LED tubes in many of our surface mount luminaires.

Featuring LED tubes and drivers from leading manufacturers such as Osram, Philips and other quality brands, these new LED T8 commercial grade replacement lamps are an energy saving LED alternative to traditional T12 or T8 fluorescent lamps and combine innovative optical and mechanical design features. Most of these lamps are DLC qualified and are available for installation in a broad range of LaMar LED's surface mount luminaires. We also offer high quality LED tubes made in the USA.

Many fixtures can also be wired for internal driver LED tubes - consult factory for details.

Features

- 4' internal driver LED tubes offer up to 2500 lumens @ 22.5W at the lamp
- Color Temperature: 3500K, 4100K, 5000K
- Glass free, vibration and impact resistant
- Safe - no line voltage at sockets on external driver LED tubes
- No warm-up time, instant-on with full light output and stable lamp to lamp color
- Suitable for damp and dry indoor locations
- 0-10V dimming available with external driver LED tubes
- Up to 60,000 hour rated life (L70)
- Available in 2' and 4' sizes
- Beam Angle: 150 deg
- No UV emission, easy to replace
- Driver and tube warranty up to 5 years
